Exploring Classification with Weka

In this assignment we used the machine learning exploratory tool Weka to compare methods for classification. The dataset Satimage was used, which contains six different classes. We found that SVM had the lowest misclassification error of any of the methods (with the parameter values shown in the table), while still maintaining a fast computation speed. Below is a table of misclassification errors for train and test sets, as well as runtime for each algorithm. Also included is a plot of test errors vs. computation speed.

| Method | Training Set | | Testing Set | |
|---------------------------------------|---------------|-------------|---------------|-------------|
| | Minimum error | Runtime (s) | Minimum error | Runtime (s) |
| Decision tree | 0.024 | 0.25 | 0.148 | 0.25 |
| Random Forest (100 trees) | 0 | 3.46 | 0.086 | 3.10 |
| Random Forest (300 trees) | 0 | 9.75 | 0.087 | 9.75 |
| Logistic Regression | 0.119 | 2.84 | 0.162 | 2.84 |
| Multilayer Perceptron | 0.048 | 35.30 | 0.125 | 36.22 |
| Naïve Bayes | 0.203 | 0.02 | 0.204 | 0.02 |
| Adaboost (20 trees) | 0 | 5.39 | 0.102 | 5.75 |
| Adaboost (100 trees) | 0 | 27.62 | 0.084 | 29.24 |
| LogitBoost (10 stumps) | 0.122 | 1.20 | 0.153 | 1.07 |
| LogitBoost (100 stumps) | 0.034 | 11.71 | 0.118 | 11.55 |
| LogitBoost (100 stumps, 0.95 trim) | 0.033 | 3.58 | 0.124 | 3.96 |
| LogitBoost (25 regression trees) | 0 | 117.78 | 0.083 | 105.35 |
| SVM (c = 3, gamma = 5) | 0.033 | 3.85 | 0.078 | 4.01 |
